Do we have what it takes to fight climate change, environmental injustice, high energy bills, and lack of good jobs in our communities?

**We need to fight for real solutions that put
people and planet first!**

We must demand that big polluters and corporate utility companies pay their fair share!

We must demand a seat at the table when important decisions are made about the health and affordability of our homes and communities!

We must demand community control of weatherization and renewable energy programs that are targeted to our neighborhoods.

Because real people, have real power!
